

AMENDMENTS TO THE CLAIMS

Please amend claims 18-20, 22-37, 39, and 41-45, and cancel claims 21, 38, and 40. Following is a complete listing of the claims pending in the application, as amended:

1-17. (Cancelled)

18. (Currently Amended) An optical media device, comprising:

an optical drive configured to receive an optical storage disk containing audio and/or video data stored on the optical storage disk, wherein the optical drive includes a signal output port;

a memory card slot ~~capable of receiving~~ configured to receive a memory card containing compressed audio and/or compressed video data stored on the memory card;

a digital video and audio decompressing card coupled to said ~~the~~ memory card slot and ~~the optical drive, wherein the decompressing card is capable of~~ configured for (a) processing ~~the~~ compressed audio and/or compressed video data stored on the memory card, and (b) processing the audio and/or video data stored on the optical storage disk; and

wherein ~~the~~ a signal output port ~~capable of outputting is~~ configured to directly output processed audio and/or video data ~~decompressed video and decompressed audio signals from the digital video and audio decompressing card to an~~ audio and/or video output device.

19. (Currently Amended) The optical media device of claim 18, wherein ~~said the~~ digital video and audio decompressing card ~~further comprises~~ includes a digital video and audio decompressing chip and a memory.

20. (Currently Amended) The optical media device of claim 19, wherein ~~said the~~ digital video and audio compressing chip supports decompressing processes of MPEG layer 2 and/or layer 3.

21. (Canceled)

22. (Currently Amended) The optical media device of claim 18, wherein ~~said the~~ optical media device ~~comprises-is~~ a DVD device.

23. (Currently Amended) The optical media device of claim 18, wherein ~~said the~~ memory card ~~comprises-is~~ a compact flash card.

24. (Currently Amended) The optical media device of claim 18, wherein the memory card is a first memory card, wherein the optical media device further includes a second memory card of a different form factor than the first memory card, and wherein the said memory card slot comprises-~~includes~~ an adapter, the adapter for adapting another receiving the second memory card, of a different form factor into said memory card slot.

25. (Currently Amended) The optical media device of claim 24, wherein ~~said the~~ another ~~second~~ memory card ~~comprises a memory card selected from a group of memory cards consisting-includes one or more of a secure digital card, a compact flash card, a smart media card, a multi-media card, and a memory stick.~~

26. (Currently Amended) The optical media device of claim 18, further ~~comprising-comprising~~ a memory including a built-in program ~~adapted-configured~~ to identify a file format of the audio and/or video data stored on ~~said the~~ memory card.

27. (Currently Amended) A method, comprising:
determining a file format for compressed digital image ~~video data~~ and/or
compressed audio data stored on a memory card;
reading the compressed digital data from the memory card;
decompressing the compressed digital data; and
outputting the decompressed image ~~and/or decompressed audio data~~ at ~~from an~~
output port of an optical media device directly to a video and/or audio output
device, wherein the steps of determining a file format, reading the
compressed digital data, and decompressing the compressed digital data,
and ~~outputting the decompressed image and/or audio data~~ are performed by
an ~~the~~ optical media reading device, ~~comprising a memory and a digital video~~
and audio decompressing card.
28. (Currently Amended) The method of claim 27, wherein the optical media
device includes a digital video and audio decompressing card carried by the optical media
device, and wherein decompressing the compressed digital data includes executing a
program on a decompressing chip on the digital video and audio decompressing card,
~~wherein the memory is coupled to the decompressing chip.~~
29. (Currently Amended) The method of claim 27, wherein the file format is
~~selected from the group consisting of~~ includes one or more of JPEG, PSD, Amiga IFF,
BMP, GIF, EPS, PCX, and TIFF.
30. (Currently Amended) The method of claim 27, wherein reading the
compressed digital data includes reading compressed digital data from a PCMCIA format
memory card carried by the optical media device.
31. (Currently Amended) The method of claim 27, wherein reading the
compressed digital data includes reading compressed digital data from a memory card

inserted into an adapter, wherein the adapter is positioned in that is inserted into a memory card slot in the optical media ~~reading~~-device.

32. (Currently Amended) An ~~apparatus, comprising: an~~ optical media device having a digital video and audio decompressing card, wherein the optical media device is configured adapted to:

determine a file format for compressed digital data stored on a memory card;

read the compressed digital data from the memory card;

decompress the compressed digital data; and

output the decompressed data ~~at from~~ an output port carried by the optical media device directly to an audio and/or video output device, ~~wherein the optical media device comprises a digital video and audio decompressing card.~~

33. (Currently Amended) The optical media device apparatus of claim 32, wherein the optical media device is further ~~adapted~~ configured to decompress the compressed digital data by executing a program on a decompressing chip on the digital video and audio decompressing card, ~~wherein the memory is coupled to the decompressing chip.~~

34. (Currently Amended) The optical media device apparatus of claim 32, wherein the file format ~~comprises~~ includes a JPEG format file.

35. (Currently Amended) The optical media device apparatus of claim 32, wherein the optical media device is further ~~adapted~~ configured to read the compressed digital image from a PCMCIA formatted memory card.

36. (Currently Amended) The optical media device apparatus of claim 32, wherein the optical media device is further ~~adapted~~ configured to read the compressed

digital data from a memory card inserted into an adapter that is ~~inserted~~ positioned in a into a-memory card slot in the optical media device.

37. (Currently Amended) The optical media device of claim 26~~36~~, wherein the ~~audio and/or video~~ compressed digital data stored on the memory card is stored in a file format selected from the ~~group consisting of~~ one or more of JPEG, PSD, Amiga IFF, BMP, GIF, EPS, PCX, and TIFF.

38. (Canceled)

39. (Currently Amended) The ~~apparatus~~ optical media device of claim 32, wherein the compressed digital data ~~comprises compressed image~~ includes video and/or audio data.

40. (Canceled)

41. (Currently Amended) An ~~apparatus~~ optical media device, comprising:
means for reading compressed digital data from a memory card, wherein the compressed digital data includes compressed digital image and/or compressed audio data;
means for determining a file format for the compressed digital data stored on the memory card;
means for decompressing the compressed digital data ~~into decompressed image and/or decompressed audio data~~; and
means for outputting the decompressed ~~image and/or decompressed audio~~ digital data ~~at from an output port~~ carried by the optical medial device directly to an output device,
wherein ~~said the~~ means for determining a file format, ~~said the~~ means for reading the compressed digital data, ~~said the~~ means for decompressing the compressed

digital data, and ~~said-the~~ means for outputting the decompressed image and/or-decompressed audio-digital data are included in an-the optical media reading-device, comprising a digital video and audio-decompressing card means-and-a memory.

42. (Currently Amended) The optical media deviceapparatus-of claim 41, wherein the means for decompressing the compressed digital data includes a digital video and audio decompressing card, and wherein said-means-for-decompressing-the compressed-digital-data-the digital video and audio decompressing card includes means for executing a program on a decompressing chip on the digital video and audio decompressing card-means, wherein-the-memory-is-coupled-to-the-decompressing-chip.

43. (Currently Amended) The optical media deviceapparatus-of claim 42, wherein the file format is selected from the-group-consisting-one or more of JPEG, PSD, Amiga IFF, BMP, GIF, EPS, PCX, and TIFF.

44. (Currently Amended) The optical media deviceapparatus-of claim 41, wherein said-the means for reading the compressed digital data includes means for reading compressed digital data from a PCMCIA format memory card.

45. (Currently Amended) The optical media deviceapparatus-of claim 41, further comprising a memory card slot and an adapter, wherein said-the means for reading the compressed digital data includes means for reading compressed digital data from a memory card inserted into an-the adapter that is inserted-into-a-positioned-in-the memory card slot in the optical media reading-device.
